Medical Inventory Management Project Documentation

1. Project Overview

The **Medical Inventory Management System** is a Salesforce application designed to streamline the process of managing medical inventory. It helps track suppliers, products, purchase orders, order items, and inventory transactions in a single platform.

This system improves:

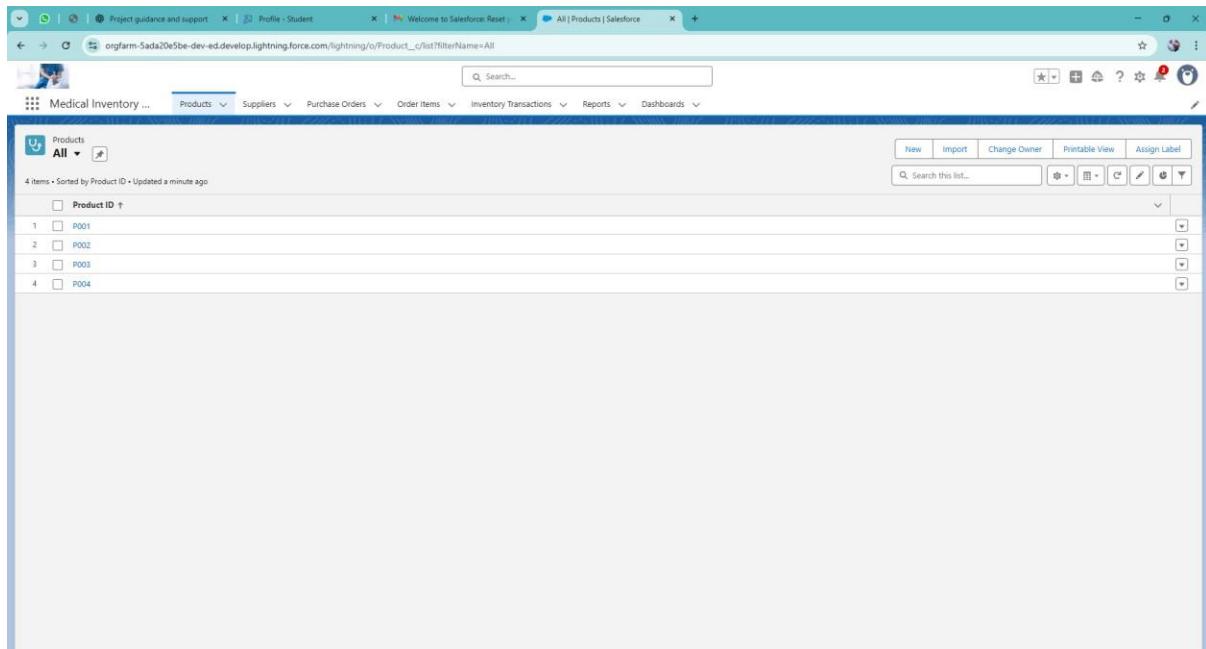

- Supplier tracking
- Stock level monitoring
- Order management
- Expiry date tracking
- Report generation and analytics

2. Objectives

The main objectives of this project are:

1. To efficiently manage and track **medical products** and their **stock levels**.
2. To streamline the **purchase order process** by linking suppliers and products.
3. To ensure **real-time monitoring** of stock and expiry dates.
4. To generate **insightful reports and dashboards** for decision-making.
5. To automate repetitive tasks using Salesforce tools like **flows and validation rules**.

Medical Inventory Management App.

3. Created a developer org in salesforce.

1. Go to <https://developer.salesforce.com/signup>
2. On the sign up form, enter the following details :
- 3.

A screenshot of a web browser showing the "Sign up for your Developer Edition" form. The page has a dark blue background with white text and features two cartoon characters on the left: a white robot-like character and a blue, spiky-haired character. The form fields include:

- First name: SURYA
- Last name: S
- Job title: developer
- Work email: suryaerde05@gmail.com
- Company: nandha arts and scienc
- Country/Region: India

A note at the bottom states: "Your org may be provisioned on or migrated to Hyperforce, Salesforce's public cloud infrastructure." Below the form is a checkbox for agreeing to the "Main Services Agreement – Developer Services and Salesforce Program Agreement". At the bottom, there is a "Sign Me Up" button and a reCAPTCHA field.

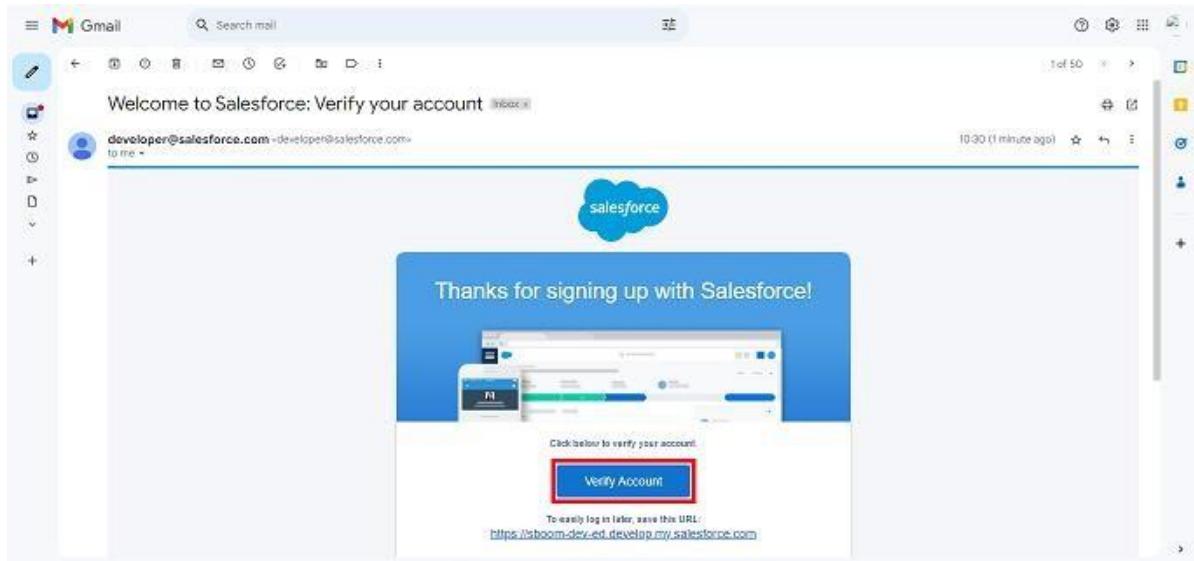

1. First name & Last name
2. Email

3. Role : Developer
4. Company : College Name
5. County : India
6. Postal Code : pin code

Click on sign me up after filling these.

4. Account Activation

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

2. Click on Verify Account
3. Give a password and answer a security question and click on change password.

Change Your Password

Enter a new password for lead@sb.oom.
Make sure to include at least:

- 8 characters
- 1 letter
- 1 number

* New Password
..... Good

* Confirm New Password
..... Match

Security Question
In what city were you born?

* Answer
asdfghjkl

Change Password

4. Then you will redirect to your salesforce setup page.

5. Objects Created

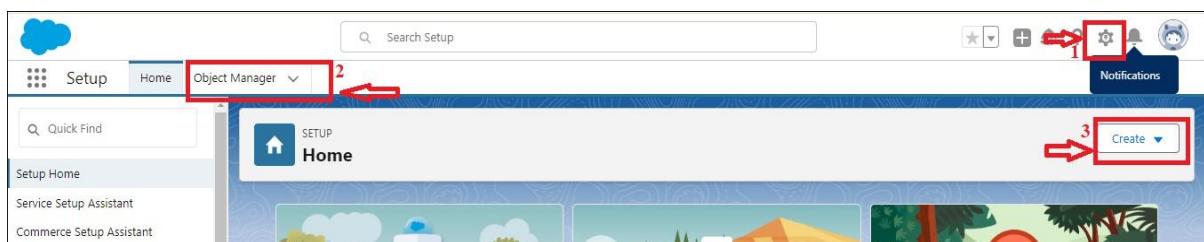

The following **custom objects** were created to manage the system:

Object Name	Purpose
Supplier	To store supplier details like name, contact person, phone, and address.

Object Name	Purpose
Product	To store product information like unit price, current stock level, and minimum stock level.
Purchase Order	To record order details from suppliers.
Order Item	To link products with each purchase order and track quantities and costs.
Inventory Transaction	To track stock movement (Inbound/Outbound).
In Salesforce, objects are database tables that allow you to store data specific to your organization.	

To create an object:

1. From the setup page
2. Click on Object Manager
3. Click on Create >> Click on Custom Object.
4. Enter the label name as Product
5. Enter Plural label name as Products
6. Enter Record Name as Product ID
7. Select Data Type as Text.
8. Select Allow reports.
9. Select Allow search.
10. Click on Save and New

The screenshot shows the 'New Custom Object' page in the Salesforce Setup. The 'Label' field (4) contains 'Product' and the 'Plural Label' field (5) contains 'Products'. The 'Record Name' field (6) contains 'Product ID'. The 'Data Type' dropdown (7) is set to 'Text'. Under 'Optional Features', 'Allow Reports' is checked (8). In the 'Deployment Status' section, 'Deployed' is selected (9). At the bottom, the 'Save & New' button (10) is highlighted.

In the same way Created Purchase Order, Order Item, Inventory Transaction and Supplier objects.

6. Tabs Created

In Salesforce, tabs are used to make the data stored in objects accessible to users through the user interface. Tabs are a fundamental part of the Salesforce interface, providing a way to navigate to different objects and records.

1. Go to the setup page >> type Tabs in Quick Find bar
2. Click on tabs
3. Click on New (under custom object tab).

4. Select Object(Product) >> Select the tab style
5. Click on Next >> (Add to profiles page) keep it as default >> Click on Next (Add to Custom App) uncheck the include tab .
6. Make sure that the Append tab to user's existing personal customizations is checked.
7. Click save

Custom Tabs

You can create new custom tabs to extend Salesforce functionality or to build new application functionality.

Custom Object tabs look and behave like the standard tabs provided with Salesforce. Web tabs allow you to embed external web applications and content within the Salesforce window. Visualforce tabs allow you to embed Visualforce pages. Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app. Lightning Page tabs allow you to add Lightning Pages to Lightning Experience and the mobile app.

	New	What Is This?
Custom Object Tabs	3	
Web Tabs	3	
Visualforce Tabs	3	

No Custom Object Tabs have been defined

No Web Tabs have been defined

No Visualforce Tabs have been defined

Activate Windows

Step 1. Enter the Details

Step 1 of 3

Select an existing custom object or create a new custom tab now.

Object	Product	4
Tab Style	Stethoscope	4

(Optional) Choose a Home Page Custom Link to show as a splash page the first time your users click on this tab.

Splash Page Custom Link: **-None-**

Enter a short description.

Description:

5

Next Cancel

- Now created the Tabs for the remaining Objects, they are “Purchase Order, Order Item, Inventory Transaction, Supplier”.
- Followed the same steps as mentioned in above.

The screenshot shows the Salesforce Setup interface with the 'Tabs' section selected. A table lists five custom object tabs:

Action	Label	Tab Style	Description
Edit Del	Inventory Transactions	Stethoscope	
Edit Del	Order Items	Stethoscope	
Edit Del	Products	Stethoscope	
Edit Del	Purchase Orders	Stethoscope	
Edit Del	Suppliers	Stethoscope	

Below the table, sections for Web Tabs, Visualforce Tabs, Lightning Component Tabs, and Lightning Page Tabs are shown, each indicating 'No [Tab Type] have been defined'.

7. Created a Lightning App for Medical Inventory Management

- From Setup, enter App Manager in the Quick Find and select App Manager.
- Click New Lightning App.
- Enter Medical Inventory Management as the App Name >> Click on upload image and add an image related to Medical Inventory then click next
- Under App Options, leave the default selections and click next.
- Under Utility Items, leave as is and click Next.
- From Available Items, select Products, Purchase Orders, Order Items, Inventory Transactions, Suppliers, Reports, and Dashboards and move them to Selected Item and Click Next.
- From Available Profiles, select System Administrator and move it to Selected Profiles.
- Click Save & Finish.

8. Created a Text Field in Product Object

1. Click the gear icon and select Setup. This launches Setup in a new tab.
2. Click the Object Manager tab next to Home.
3. Select Product custom object.
4. Select Fields & Relationships from the left navigation
5. Click on New
6. Select Text field, click Next
7. Enter Field Label as “Product Name” and Length 255.
8. Select Required Field.
9. Click Next, Next, then Save & New.

The image consists of two screenshots of the Salesforce Setup interface.

Screenshot 1: Object Manager

This screenshot shows the Object Manager page. The 'Object Manager' tab is highlighted with a red box. The search bar contains 'Product'. A red box labeled '2' highlights the 'Object Manager' tab. A red box labeled '3' highlights the 'Product' row in the list, which has 'Product_c' as its API name.

LABEL	API NAME	TYPE	DESCRIPTION	LAST MODIFIED	DEPLOYED
Fulfillment Order Product	FulfillmentOrderLineItem	Standard Object			
Opportunity Product	OpportunityLineItem	Standard Object			
Order Product	OrderItem	Standard Object			
Product	Product_c	Custom Object		18/06/2024	✓
Product	Product2	Standard Object			
Product Attribute	ProductAttribute	Standard Object			

Screenshot 2: Fields & Relationships

This screenshot shows the Fields & Relationships page for the Product object. The 'Fields & Relationships' tab is highlighted with a red box. The search bar contains 'New'. A red box labeled '4' highlights the 'Fields & Relationships' tab. A red box labeled '5' highlights the 'New' button.

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED

9. Edited a Page Layout in Product Object

1. Go to setup >> click on Object Manager >> type object name(Product) in quick find box >> click on the Product object >> Page Layouts .
2. Click on the Product Layout.
3. Drag and Arrange the field as shown below.

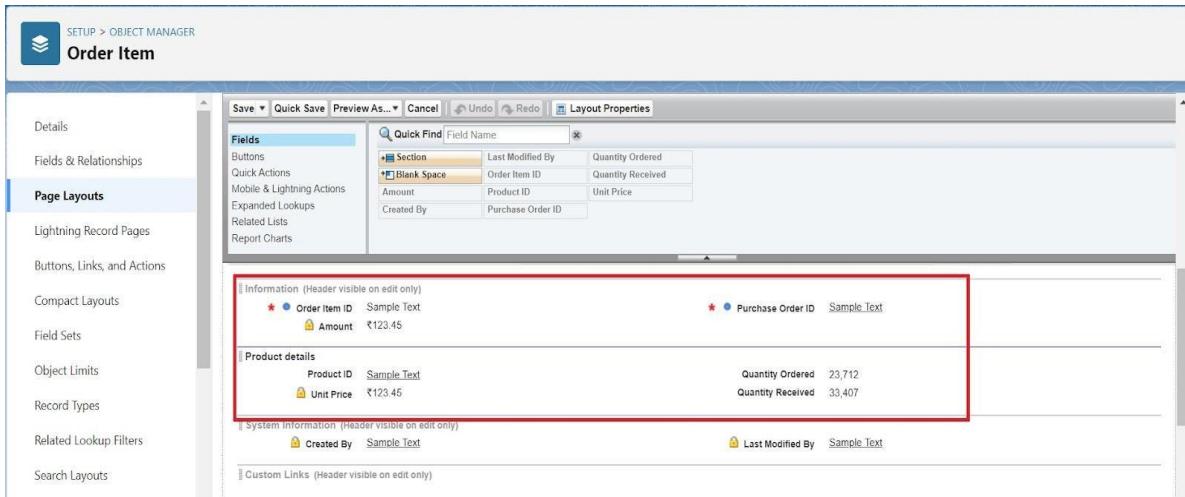

4. Click on Save.

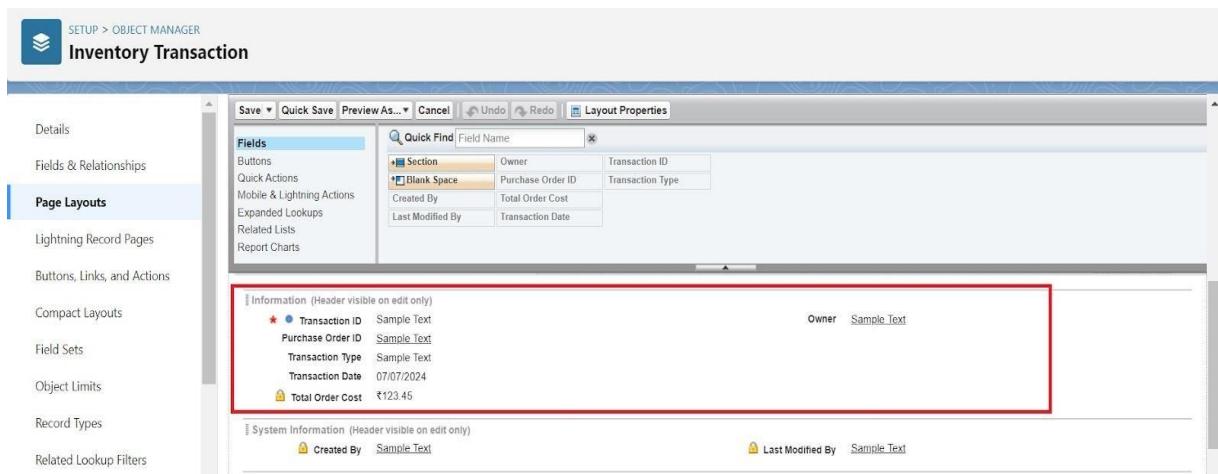

9.1 Edited a Page Layout in Purchase Order Object

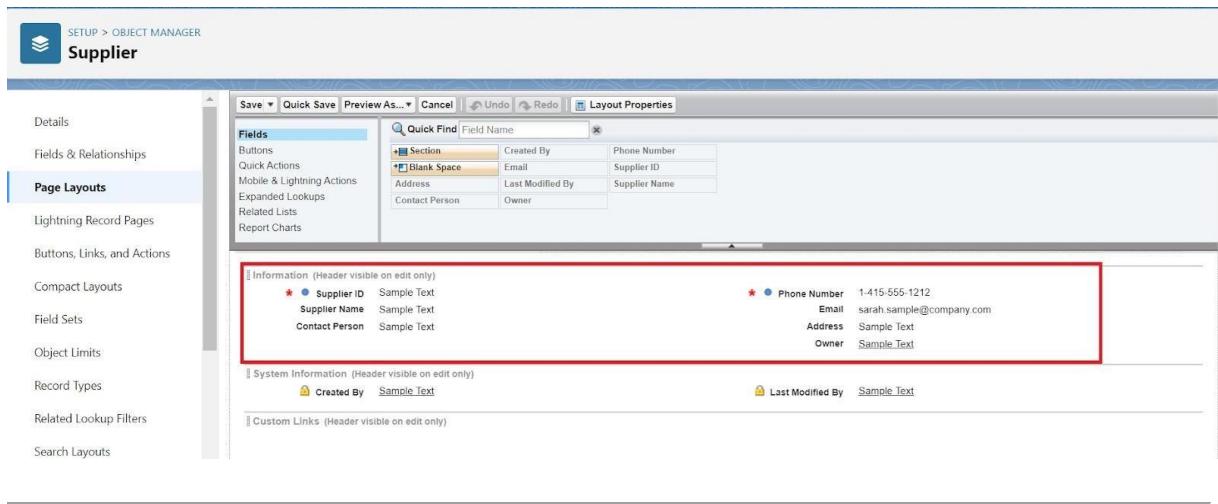

9.2 Edited a Page Layout in Order Item Object

9.3 Edited a Page Layout in Inventory Transaction Object

9.4 Edited a Page Layout in Supplier Object

10. Created a Compact Layout to a Product Object

1. Go to setup >> click on Object Manager >> type object name(Product) in quick find box >> click on the Product object
2. Click on Compact Layouts in the sidebar .
3. Click on New.

4. Enter the Label as “Product Compact Layout”.
5. Select the Compact Layout Fields : Select Product name, Unit Price, Current Stock Level.
6. Click Save.
7. Click Compact Layout Assignment.
8. Click Edit Assignment.
9. Choose "Product Compact Layout" from the dropdown.
10. Click Save.

Enter Compact Layout Information

Label: **Product Compact Layout** 4

Name: **Product_Compact_Layout**

Select Compact Layout Fields

Primary Compact Layout

Select the compact layout to use when this object's records appear as list items in the mobile app.

Primary Compact Layout: **Product Compact Layout** 9

Buttons: Save 10, Cancel

10.1 Created a Compact Layout to a Purchase Order Object

The screenshot shows the 'Compact Layout Edit' interface. In the 'Enter Compact Layout Information' section, the 'Label' field is set to 'Purchase Order Compact L' (marked with a red box and number 4) and the 'Name' field is set to 'Purchase_Order_Compact' (marked with a red box and number 4). In the 'Select Compact Layout Fields' section, the 'Available Fields' list includes 'Actual Delivery Date', 'Created By', 'Expected Delivery Date', 'Last Modified By', 'Owner', and 'Order Count'. The 'Selected Fields' list contains 'Purchase Order ID', 'Order Date', 'Total Order Cost', and 'Supplier ID'. To the right of the selected fields is a vertical arrangement of buttons labeled 'Top', 'Up', 'Down', and 'Bottom' with accompanying arrows. At the bottom of the interface, there is a note: 'Use SHIFT + click to select adjacent fields. Use CTRL + click to select an assortment of fields.' Below the interface are three buttons: 'Save' (marked with a red box and number 6), 'Cancel', and another 'Save' button.

Purchase Order Compact Layouts Compact Layout Assignment

The screenshot shows the 'Compact Layout Assignment' interface. It displays the 'Primary Compact Layout' section, which asks to select the compact layout for list items in the mobile app. A dropdown menu labeled 'Primary Compact Layout: Purchase Order Compact Layout' is highlighted with a red box and number 9. Below the dropdown are two buttons: 'Save' (marked with a red box and number 10) and 'Cancel'.

11. Create an Expected Delivery Date Validation rule to a Purchase Order Object

1. Go to setup >> click on Object Manager >> type object name(Purchase Order) in quick find box>> click on the Purchase Order object
2. Click on the validation rule >> click on New.
3. Enter the Rule name as “Expected Delivery Date Validation”.
4. Select Active
5. Insert the Error Condition Formula as :
(Expected_Delivery_Date__c - Order_Date__c)> 7

Purchase Order Validation Rule

Help for this Page

Define a validation rule by specifying an error condition and a corresponding error message. The error condition is written as a Boolean formula expression that returns true or false. When the formula expression returns true, the save will be aborted and the error message will be displayed. The user can correct the error and try again.

Validation Rule Edit Save Save & New Cancel

Rule Name: Expected_Delivery_Date_Validation 3

12. Created an Inventory Manager Profile

The screenshot shows the Salesforce Setup interface under the Profiles section. A red box highlights the 'Profiles' tab in the left sidebar. The main area displays a table of profiles with columns for Action, Profile Name, User License, and Custom. One profile, 'Standard User', is highlighted with a red box. The URL in the browser is [https://.salesforce.com/setup/profiles](#).

Clone Profile

Enter the name of the new profile.

The dialog box has a header 'You must select an existing profile to clone from.' It shows the 'Existing Profile' as 'Standard User' and 'User License' as 'Salesforce'. The 'Profile Name' field contains 'Inventory Manager', which is highlighted with a red box. At the bottom are 'Save' and 'Cancel' buttons, with 'Save' highlighted by a red box.

The screenshot shows the 'Custom App Settings' page. A red box highlights the 'Medical Inventory Management (Medical_Inventory_Management)' app under the 'Visible' column. The URL in the browser is [https://.salesforce.com/setup/customappsettings](#).

15. Created Flow to update the Actual Delivery Date.

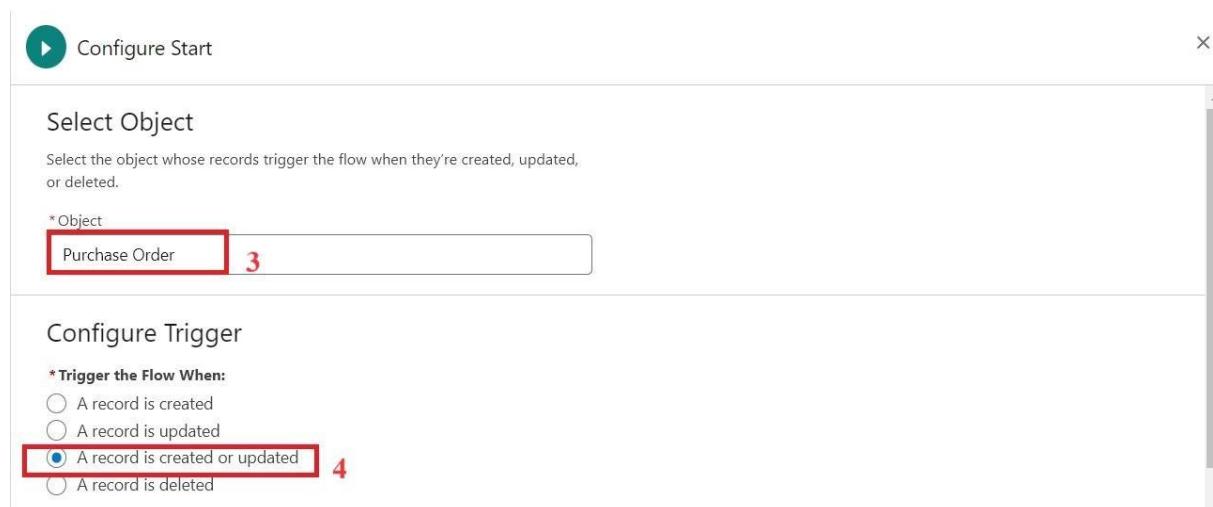

1. Go to setup >> type Flow in quick find box >> Click on the Flow and Select the New Flow >> Start From Scratch .

2. Select the record Triggered flow.Click on create.

3. Under Object select “Purchase Order”
4. Select A record is created or updated

5. Set Entry Conditions : None

6. Select Fast Field Updates and click on Done

Set Entry Conditions

Specify entry conditions to reduce the number of records that trigger the flow and the number of times the flow is executed. Minimizing unnecessary flow executions helps to conserve your org's resources.

If you create a flow that's triggered when a record is updated, we recommend first defining entry conditions. Then select the **Only when a record is updated to meet the condition requirements** option for When to Run the Flow for Updated Records.

Condition Requirements

None

5

* Optimize the Flow for:

Fast Field Updates

Update fields on the record that triggers the flow to run. This high-performance flow runs *before* the record is saved to the database.

6

Actions and Related Records

Update any record and perform actions, like send an email. This more flexible flow runs *after* the record is saved to the database.

Include a Run Asynchronously path to access an external system after the original transaction for the triggering record is successfully committed

7. Under the record trigger flow click on the “+” icon and select Get Records.

8. Enter Label as “ Get Purchase Record ”.

9. For Object select Purchase Order.

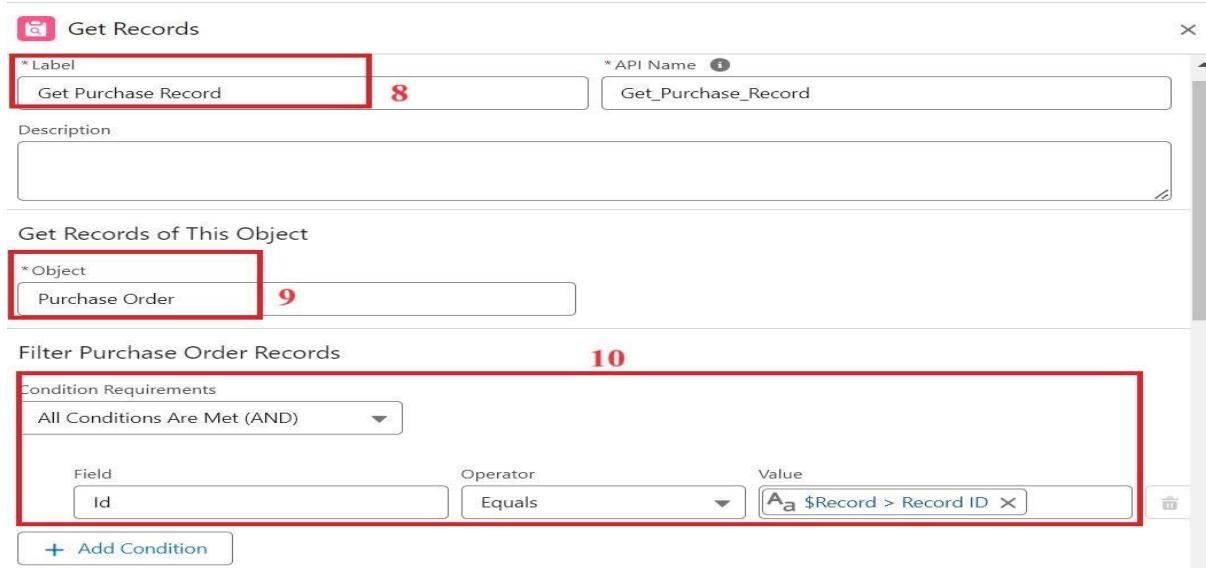

10. For Condition Requirements , select All Conditions are Met(AND)

For the first condition select as follows:

Field: Id

Operator: Equals

Value: { !\$Record.Id }

11. For How many Records to store Select Only the First Record.
12. For How to Store Record Data select Choose fields and let Salesforce do the rest. Select Field: Order_Date__c. Click on Done.

13. In the Flow Builder, click on the Manager tab on the left-hand side >> Click on New Resource >> In the Resource Type dropdown, select Variable.
14. Enter API name as ActualDeliveryDate >> Select Data type as Date >> Click on Done.
15. From the Toolbox drag and drop Assignment element.
16. Enter the label as “Assignment”.

17. Set Variable Values:

a) Variable : { !ActualDeliveryDate }

Operator : Equals

Value : { !\$Record.Order_Date__c }

b) Variable : { !ActualDeliveryDate }

Operator : Add

Value : 3

* Label
Assignment

* API Name ⓘ
Assignment_1

Description

Set Variable Values

Each variable is modified by the operator and value combination.

Variable	Operator	Value
ActualDeliveryDate	Equals	\$Record > Order Date
ActualDeliveryDate	Add	3

+ Add Assignment

18. Click Done

19. From the Toolbox drag and drop Update Records element and connect to the Assignment element.

20. Enter the label as “Updating Purchasing Order”.

21. How to Find Records to Update and Set Their Values : Use the Purchase Order record that triggered the flow

22. Set Filter Conditions : None -Always Update Record

23. Set Field Values for the Trip Record as

Field : Actual_Delivery_Date__c

Value : { !ActualDeliveryDate }

Update Records

* How to Find Records to Update and Set Their Values

- Use the purchase order record that triggered the flow
- Update records related to the purchase order record that triggered the flow
- Use the IDs and all field values from a record or record collection
- Specify conditions to identify records, and set fields individually

Because this flow runs *before* a record is saved, you can only update the record that triggered the flow to run. To update other records, configure the trigger to run the flow *after* the record is saved.

Set Filter Conditions

Condition Requirements to Update Record

None—Always Update Record

Set Field Values for the Purchase Order Record

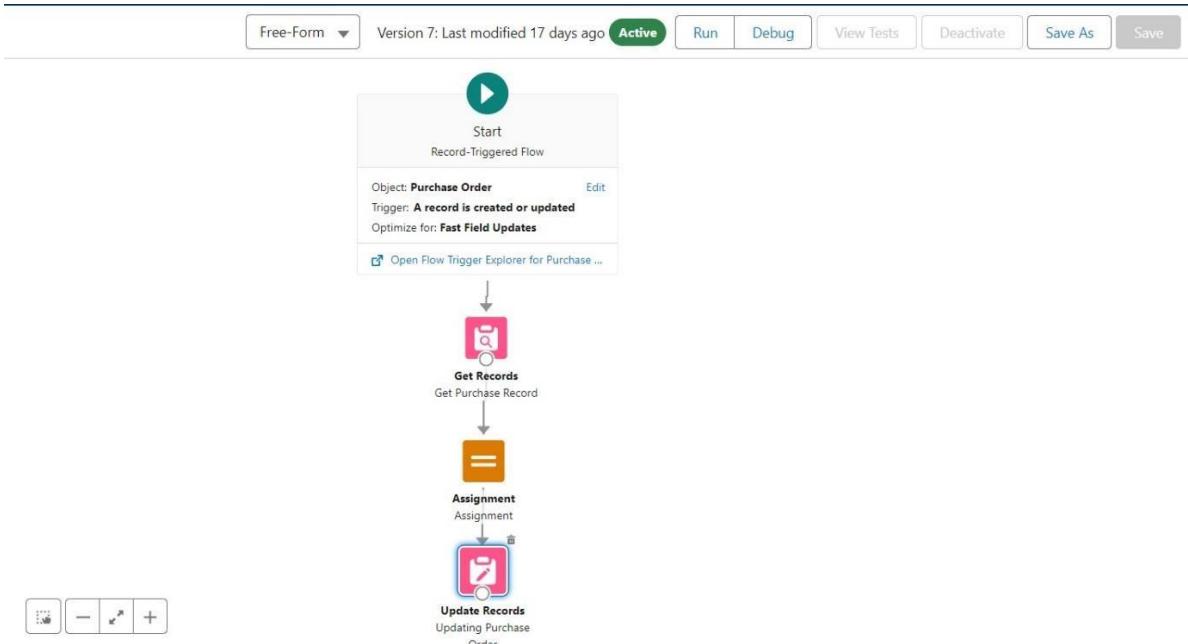

Field	Value
Actual_Delivery_Date_c	ActualDeliveryDate

+ Add Field

24. Click Done

25. Save the flow as “Actual Delivery Date Updating”.

26. Activate the flow.

16. Created a Trigger to Calculate total amount on Order Item.

Step 1 : Login to Salesforce:

Log in to your Salesforce account with administrative privileges.

Step 2:

i) Navigate to Setup: Once logged in, click on the gear icon ?? (Setup) located at the top-right corner of the page. This will open the Setup menu.

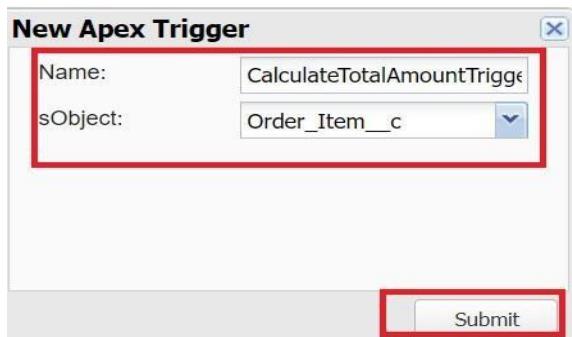

ii) Click on Developer Console: Click on the "Developer Console" option from the Setup menu. This will open the Developer Console in a new browser tab or window.

Step 3:

i) In the Developer Console window, go to the top menu and click on "File".

ii) Select New: From the dropdown menu under "File", select "New".

iii) Choose Apex Trigger: This will open a new Apex Trigger editor tab.

Create an Apex Trigger:

```
trigger CalculateTotalAmountTrigger on Order_Item__c (after insert, after update, after delete, after undelete) {
```

```

// Call the handler class to handle the logic
CalculateTotalAmountHandler.calculateTotal(Trigger.new, Trigger.old,
Trigger.isInsert, Trigger.isUpdate, Trigger.isDelete, Trigger.isUndelete);
}

```

Step 4:

- i) In the Developer Console window, go to the top menu and click on "File".
- ii) Select New: From the dropdown menu under "File", select "New".
- iii) Choose Apex Class: Name it as CalculateTotalAmountHandler

```

public class CalculateTotalAmountHandler {

    // Method to calculate the total amount for Purchase Orders based on related
    Order Items

    public static void calculateTotal(List<Order_Item__c> newItems,
List<Order_Item__c> oldItems, Boolean isInsert, Boolean isUpdate, Boolean
isDelete, Boolean isUndelete) {

        // Collect Purchase Order IDs affected by changes in Order_Item__c
records

        Set<Id> parentIds = new Set<Id>();

        // For insert, update, and undelete scenarios
        if (isInsert || isUpdate || isUndelete) {
            for (Order_Item__c ordItem : newItems) {
                parentIds.add(ordItem.Purchase_Order_Id__c);
            }
        }
    }
}

```

```
}
```

```
// For update and delete scenarios
```

```
if (isUpdate || isDelete) {
```

```
    for (Order_Item__c ordItem : oldItems) {
```

```
        parentIds.add(ordItem.Purchase_Order_Id__c);
```

```
    }
```

```
}
```

```
// Calculate the total amounts for affected Purchase Orders
```

```
Map<Id, Decimal> purchaseToUpdateMap = new Map<Id, Decimal>();
```

```
if (!parentIds.isEmpty()) {
```

```
    // Perform an aggregate query to sum the Amount__c for each Purchase  
    Order
```

```
    List<AggregateResult> aggrList = [
```

```
        SELECT Purchase_Order_Id__c, SUM(Amount__c) totalAmount
```

```
        FROM Order_Item__c
```

```
        WHERE Purchase_Order_Id__c IN :parentIds
```

```
        GROUP BY Purchase_Order_Id__c
```

```
];
```

```
// Map the result to Purchase Order IDs
```

```
for (AggregateResult aggr : aggrList) {
```

```
    Id purchaseOrderId = (Id)aggr.get('Purchase_Order_Id__c');
```

```
    Decimal totalAmount = (Decimal)aggr.get('totalAmount');
```

```
    purchaseToUpdateMap.put(purchaseOrderId, totalAmount);
```

```
}
```

```

// Prepare Purchase Order records for update

List<Purchase_Order__c> purchaseToUpdate = new
List<Purchase_Order__c>();
for (Id purchaseOrderId : purchaseToUpdateMap.keySet()) {
    Purchase_Order__c purchaseOrder = new Purchase_Order__c(Id =
purchaseOrderId, Total_Order_cost__c =
purchaseToUpdateMap.get(purchaseOrderId));
    purchaseToUpdate.add(purchaseOrder);
}

// Update Purchase Orders if there are any changes
if (!purchaseToUpdate.isEmpty()) {
    update purchaseToUpdate;
}
}

}

```

Save all.

17. Created a Purchase Orders based on Suppliers(Summary) Report

1. Click App Launcher
2. Select Medical Inventory Management App
3. Click on Reports tab
4. Click on New Report.
5. Click the report type as Purchase Orders Click Start report.

7. Customize your report, in group rows select – Supplier ID, Purchase Order: Purchase Order ID, for columns Order Count, Total Order Cost (In this way we are making a Summary Report).

8. Click save and run

9. Give report name – Purchase Orders based on Suppliers.

10. Click Save

NOTE: In this report you can see your all record of the object you selected for reporting

(What you selects in “Select a report type option”)

View Report

1. Click on App Launcher on the left side of the screen.
2. Search Medical Inventory Management App & click on it.
3. Click on Reports Tab.
4. Click on Purchase Orders based on Suppliers and see records.

17.1 Created a Complete Purchase Details Report

1. Click App Launcher
2. Select Medical Inventory Management App
3. Click on Reports tab

4. Click on New Report.

5. Click the report type as Purchase Orders with Order Items and Product ID
>> Click Start report.

6. Click on Filters and select as follows and click on Apply

The screenshot shows the 'Filters' section of a reporting tool. At the top, there's a 'Filters' button with a dropdown arrow. Below it is a search bar with the placeholder 'Add filter...' and a magnifying glass icon. A red box highlights the 'Show Me' section, which contains the text 'All purchase orders'. Another red box highlights the 'Actual Delivery Date' section, which contains the text 'All Time'.

7. Customize your report, in group rows select – Supplier ID, Actual Delivery Date, Purchase Order: Purchase Order ID, for columns Product ID : Product ID, Product ID : Product Name, Order Count, Quantity Received, Amount (In this way we are making a Summary Report).

8. Click save and run

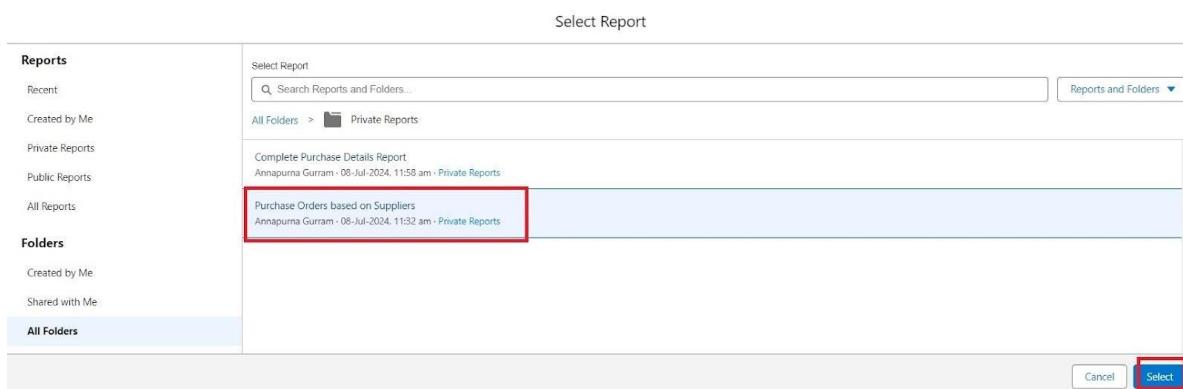

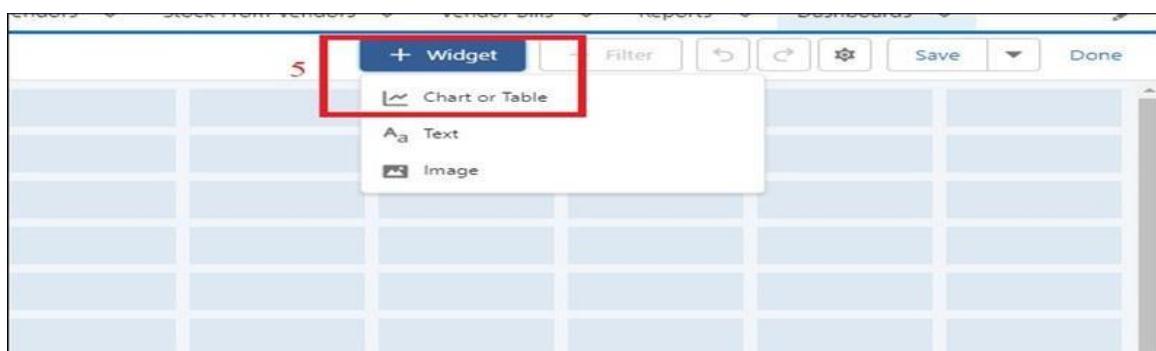

9. Give report name – Complete Purchase Details Report

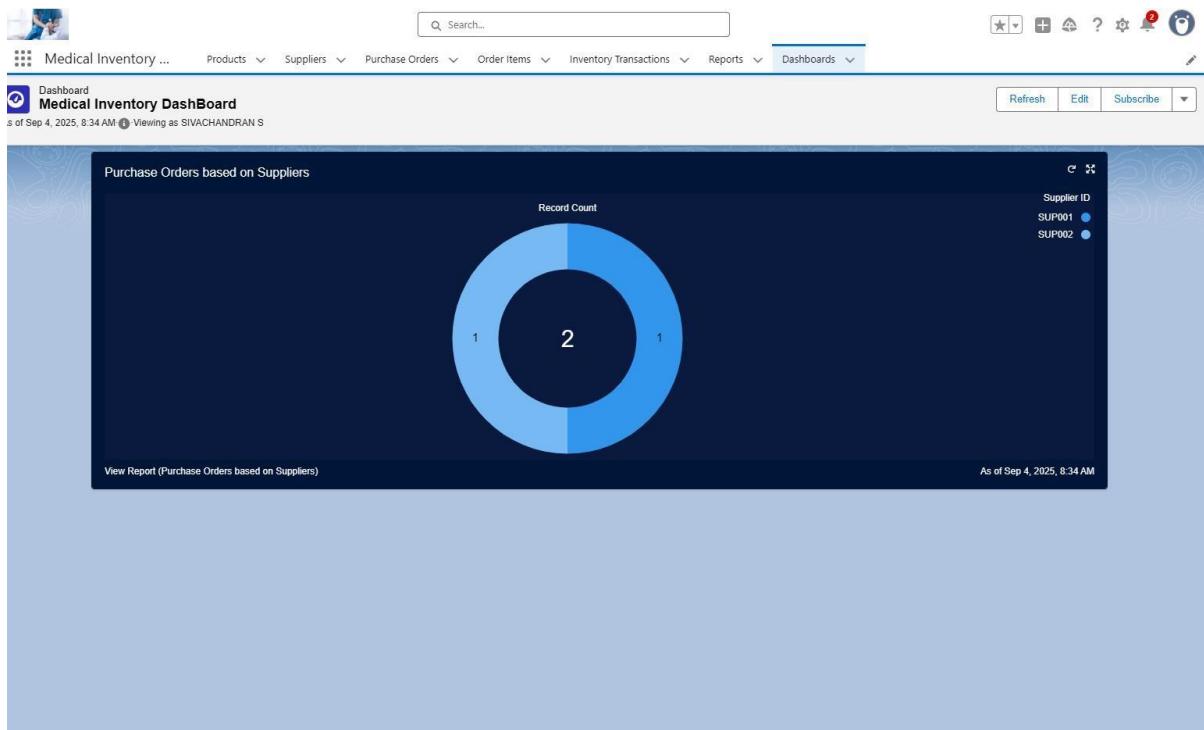

10. Click Save

The screenshot shows the 'Complete Purchase Details Report' interface. At the top, there's a navigation bar with 'Products', 'Purchase Orders', 'Order Items', 'Inventory Transactions', 'Suppliers', 'Reports', and 'Dashboards'. Below the navigation is a toolbar with 'Save & Run' (highlighted with a red box), 'Save', 'Close', and 'Run'. On the left, there's a 'Fields' sidebar with 'Groups' (highlighted with a red box) and 'Columns' (highlighted with a red box). The main area displays a table of data with columns: 'Supplier ID', 'Actual Delivery Date', 'Purchase Order: Purchase Order ID', 'Product ID: Product ID', 'Order Count', 'Product ID: Product Name', 'Quantity Received', and 'Amount'. The data is grouped by 'Supplier ID' and 'Actual Delivery Date', with subtotals for each group. A red box highlights the 'Update Preview Automatically' checkbox at the bottom right of the preview area. At the bottom of the interface, there are buttons for 'Row Counts', 'Detail Rows', 'Subtotals', and 'Grand Total' (all highlighted with red boxes).

18. Created Dashboard

1. Click on the Dashboards tab from the Medical Inventory Management application.
2. Click on the new dashboard.
3. Give name - Medical Inventory DashBoard
4. Click create
5. Click on +widget
6. Select the Purchase Orders based on Suppliers Report
7. For the data visualization select any of the charts, tables etc. as per your choice/requirement
8. Click add.
9. Click save.

19. Testing Approach

To ensure the app works as intended:

- **Step 1:** Created sample suppliers, products, purchase orders, and transactions.
- **Step 2:** Verified validations by entering incorrect data.
- **Step 3:** Checked automation by adding inbound transactions to see if stock updated correctly.
- **Step 4:** Reviewed reports and dashboards to ensure accurate totals.

The screenshot displays five vertically stacked windows, each titled 'Recently Viewed' and showing a list of recently viewed items. The windows are part of a medical inventory management system, as indicated by the top navigation bar.

- Products:** Shows 4 items updated a few seconds ago. The list includes Product ID P004 (selected), P003, P002, and P001.
- Suppliers:** Shows 2 items updated a few seconds ago. The list includes Supplier ID SUP002 (selected) and SUP001.
- Purchase Orders:** Shows 2 items updated a few seconds ago. The list includes Purchase Order ID P002 (selected) and P001.
- Order Items:** Shows 2 items updated a few seconds ago. The list includes Order Item ID OI002 (selected) and OI001.
- Inventory Transactions:** Shows 2 items updated a few seconds ago. The list includes Inventory Transaction ID T002 (selected) and T001.

Each window includes a search bar at the top right, a toolbar with various icons, and a 'Search...' input field at the bottom right. The top navigation bar features links for Products, Suppliers, Purchase Orders, Order Items, Inventory Transactions, Reports, and Dashboards.

20. Conclusion

The **Medical Inventory Management System** successfully demonstrates how Salesforce can be used to manage medical products, suppliers, and stock efficiently.

By using custom objects, validation rules, flows, reports, and dashboards, the application provides a complete solution for inventory management with real-time tracking and analytics.
